

Build strong and aesthetic architectural façades with Saint-Gobain façade systems

Build strong and aesthetic architectural façades with Saint-Gobain façade systems

A building's exterior not only fulfils the primary function of protecting the inside from the elements, it also projects an image to the outside world. That's why Saint-Gobain provides glazing and façade systems used for beautiful and high-performing façades.

We offer ready-to-install insulating glass systems for industrial and commercial construction.

Advantages of our Façade systems

TRANSPARENCY AND NATURAL LIGHT

Saint-Gobain façade systems maximise interior natural light and blur the lines between interior and exterior. Minimising visible façade structures and connections, these systems help you to create comfortable spaces,

opened to the outside.

AESTHETICS

Façades designed with Saint-Gobain façade systems do not have any vertical or horizontal beams. Seen from the outside, they appear to be fully glazed, consistent and seamless.

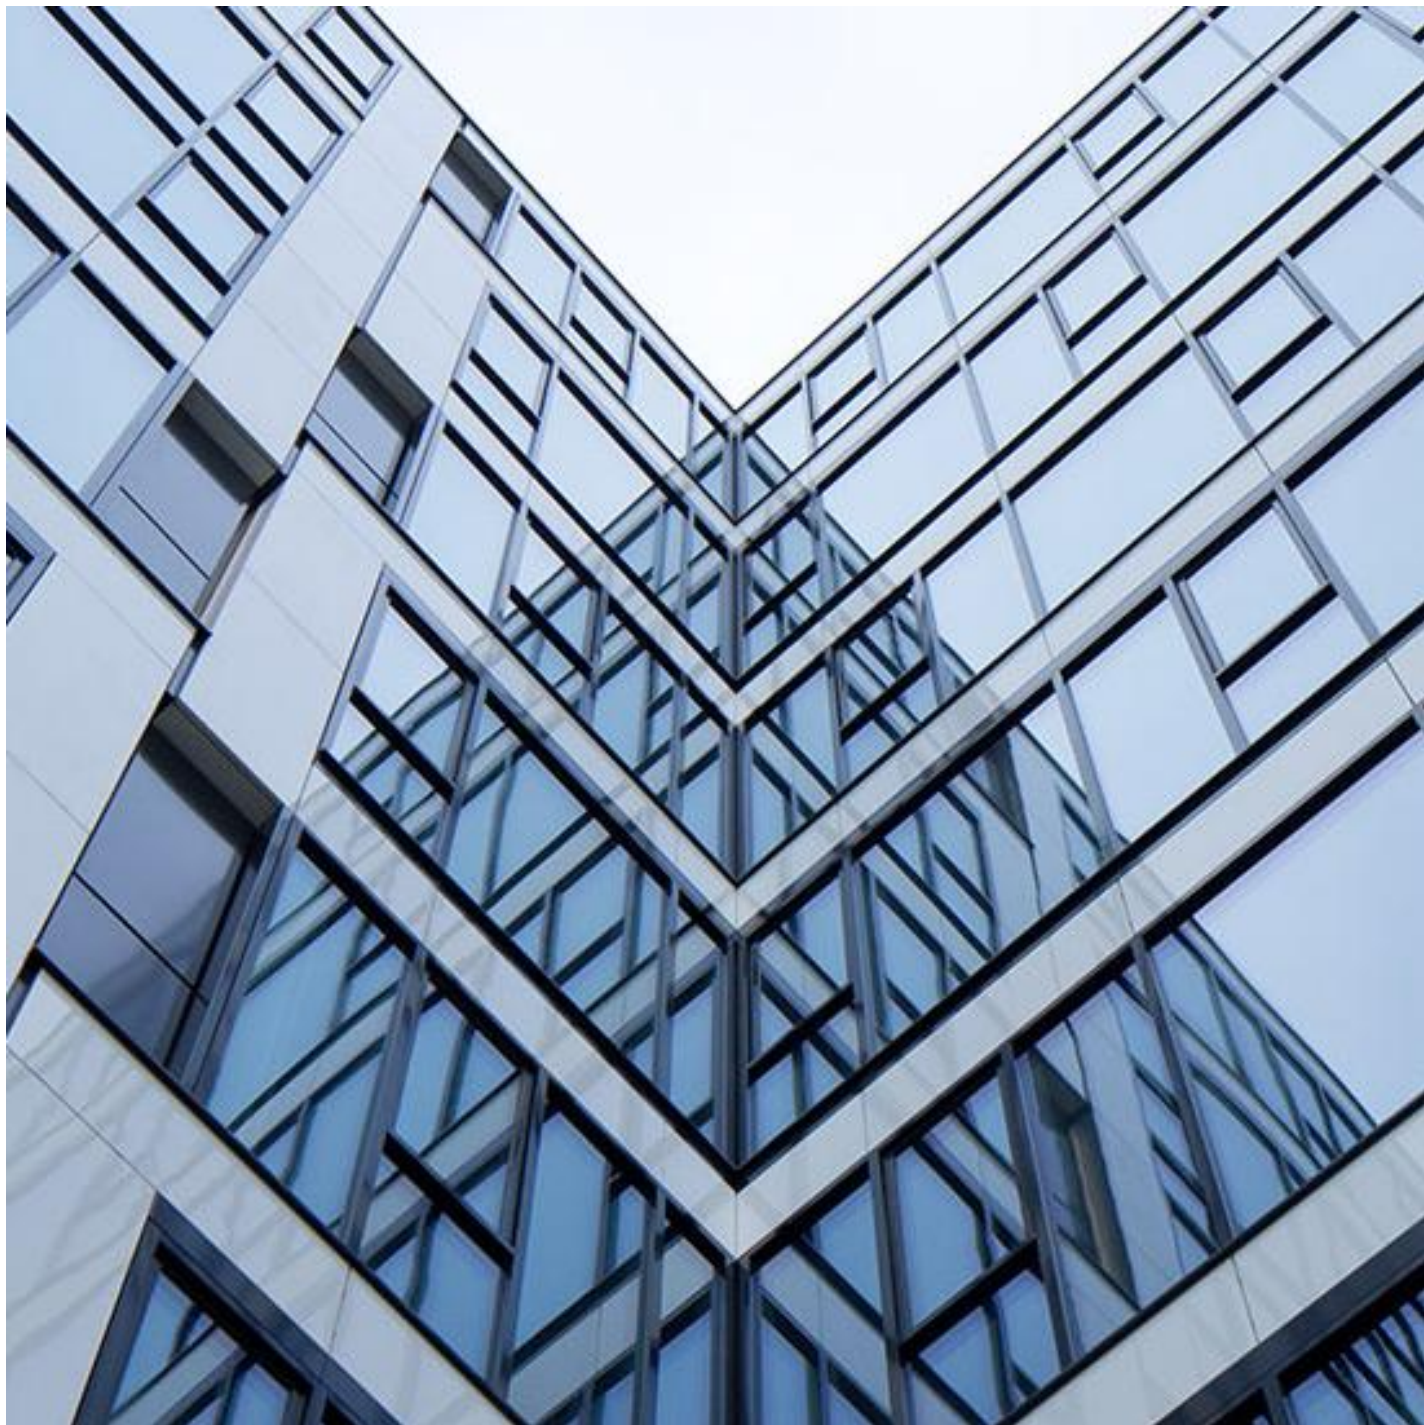

COMPATIBILITY WITH SAINT-GOBAIN SOLAR CONTROL GLAZING

In an extensively glazed space, it may be crucial to use solar-control glazing to avoid overheating and the excessive consumption of energy for air conditioning. That's why we are committed to providing you with products that will improve your comfort. Many of our façade systems are compatible with the SGG COOL-LITE SKN II and XTREME II ranges, the most complete and effective on the market.

EASY INSTALLATION

With optimised fixing points, frameless or ready-to-install solutions, Saint-Gobain façade systems make your life easier when assembling and installing façades on-site.
