

# SGG VIEWCLEAR®

## Description

SGG VIEWCLEAR® II maintains clear and neutral aesthetics in both transmission and reflection, and maximises the entry of natural light into the building. It is also designed for ease of processing and edge-deletion is not required.

As legislation has evolved, the demands on thermal performance of windows continues to increase. This, combined with innovations such as triple glazing, present the industry with a challenge – how to deliver windows with exceptional thermal performance without compromising the view – impacted by the build of condensation on the exterior pane of glass. Now, there is a unique solution, SGG VIEWCLEAR® II.
