

# VS-1 - CURTAIN WALLING

## Description

VS1 is designed for [curtain wall systems](#). Ideally suited to situations where designs dictate a clean line solution using only mullions

VS-1's highly engineered simplicity delivers remarkable aesthetics for architects, developers and building owners. It is the only curtain wall system where the floating glass façade is held away from an attractive aerofoil shaped mullion without the use of obtrusive bolt fixings or transoms. Its relative simplicity reduces risk of component failure, improves constructability and reduces costs of programme delays in both construction and post-construction phases.
