

GREEN BUILDINGS

SAINT-GOBAIN'S SOLUTIONS FOR

GREEN BUILDINGS

Our online platform to select the best glazing solutions for project which aims to obtain a green building certification.

Discover how our solutions can help certify your sustainable building projects (LEED, BREEAM, WELL and EDGE)

For LEED, BREEAM, WELL labelling schemes you can easily discover how glass solutions - glass façade & windows, design glass, fire resistant & high security glass and electrochromic (switchable) glass - are contributing to the label's criteria such as daylight, thermal comfort, low emitting materials etc. Beyond the contribution brought by high performance glazing characteristics, we also provide associated tools and services to help our customers in designing their building project.

In just a few clicks, you can also download all of the required [documentation](#) for your certification project such as the **Environmental Product Declaration, Recycled Content Declaration** and more.

Innovative, intuitive and time-saving: the tool is custom-designed to answer to property owners, architects, consultants, building developers and contractors' needs.

Some examples of certified buildings:
